

FAQ's on Nature's Nectar

Q: Why don't I need to adjust pH when using Nature's Nectar?

A: Mineral based hydroponic solutions are very simple and many contain only 6 or 12 ions that are easy to control with acids or bases. True organic formulations are very complex and contain hundreds of species that the plants can utilize at varying pH levels.

Q: Can I increase the Phosphorus and Potassium parts of Nature's Nectar even though the directions do not state this?

A: No. Adding more of any component in the Nature's Nectar line will not have any added benefits.

Q: What is the reason I can't have bubblers in my reservoir?

A: Bubblers take airborne bacteria and inject them into a pool of water and organic nutrients. That is a perfect recipe for creating bacterial growth in the reservoir.

Q: I have a very expensive PPM pen. Why is your nutrient not registering?

A: Mineral or chemical based nutrient solutions carry an electrical charge that ultimately makes your pen pick up the ppm. Our OMRI certified Nature's Nectar raw materials and finished solutions carry no electrical charge. No matter how expensive the pen is, it is useless when using with true organics. Those gardeners who are just starting in the hobby can save money by not purchasing this piece of equipment.

Q: I notice Nature's Nectar is a stand alone certified organic solution but has no micros? How can this be?

A: There is Calcium in Nature's Nectar Phosphorus plus Iron, Magnesium and Calcium in Nature's Nectar Potassium. The levels of these nutrients are acceptable to several states but also unacceptable to a few. This would lead to HigoCorp having to print several labels which we want to avoid. For additional micros we have OMRI certified Organa Add. It contains all micros in an organic form and it should be sprayed every 7 - 10 days at 2 ml / L.

Nature's Nectar
CERTIFIED ORGANIC NUTRIENTS

OMRITM
Listed
Organic Materials Review Institute

This organic nutrient program is not only very effective, but also very simple. It has been proven in greenhouse & field tests that the same product dosage can be used for the entire growth cycle of the plant. It will not burn your seedlings, yet it can grow 20 ft. plants loaded with fruit.
